Serial No. 10/681,634 Response Under 37 C.F.R. § 1.111

February 21, 2006

The Claims

1. (Original) An imaging system comprising:

a central processing unit;

a data storage unit in communication with said central processing unit;

an imaging device in electrical communication with said central processing unit;

and

a biometric authorization unit in electrical communication with said central

processing unit, wherein a user inputs a biometric identifier into said biometric

authorization unit in order to enable use of the imaging system.

2. (Original) The imaging system of claim 1, wherein biometric data extracted

from the biometric identifier is compared with stored biometric data in said data storage

unit, wherein the stored biometric data is associated with stored personal identification

information, and wherein the stored biometric data and the stored personal identification

information are stored after an initial registration.

3. (Original) The imaging system of claim 2, wherein user preference

information is associated with the stored biometric data and with the personal

identification information.

4. (Original) The imaging system of claim 2, wherein use of the imaging system

is allowed when a match exists between the biometric data extracted from the biometric

identifier and the stored biometric data.

Serial No. 10/681,634 Response Under 37 C.F.R. § 1.111

February 21, 2006

5. (Original) The imaging system of claim 1, wherein information regarding the

use of the imaging system by the user is stored in said data storage unit.

6. (Original) The imaging system of claim 1, wherein the imaging device is an

ultrasound probe and the imaging system is an ultrasound imaging system.

7. (Original) The imaging system of claim 1, wherein the imaging system is a

medical imaging system including one of a Computed Tomography (CT), X-ray, Positron

Emission Tomography (PET), Single Photon Emission Computed Tomography (SPECT),

Electron Beam Tomography (EBT), Magnetic Resonance (MR), and image-guided

surgery system.

8. (Original) The imaging system of claim 1, wherein the biometric identifier is

at least one of a fingerprint, handprint, voice, iris, retina, and facial thermogram.

9. (Original) The imaging system of claim 1, wherein the medical imaging

system is networked into at least one other imaging system.

Serial No. 10/681,634

Response Under 37 C.F.R. § 1.111

February 21, 2006

10. (Original) A medical imaging network comprising a plurality of medical

imaging systems in communication with one another, each of said medical imaging

systems comprising:

a medical imaging device; and

a biometric authorization unit, wherein a user inputs a biometric identifier into

said biometric authorization unit in order to use the medical imaging device.

11. (Original) The medical imaging network of claim 10, further comprising a

central management station in communication with each of said plurality of medical

imaging systems.

12. (Original) The medical imaging network of claim 11, wherein biometric data

extracted from the biometric identifier is stored in at least one of a central data storage

unit in said central management station and individual data storage units in said plurality

of imaging systems.

13. (Original) The medical imaging network of claim 11, wherein use

information, including at least one of user identity, time, and length of an imaging session

at each of said plurality of imaging systems is stored within at least one of said central

management station and any of said plurality of imaging systems.

Serial No. 10/681,634

Response Under 37 C.F.R. § 1.111

February 21, 2006

14. (Original) The medical imaging network of claim 11, wherein a user initially

registers at one of said central management station and one of said plurality of imaging

systems.

15. (Original) The medical imaging network of claim 12, wherein personal

identification information and user preference information is associated with the stored

biometric data.

16. (Original) The medical imaging network of claim 10, wherein at least one of

said plurality of imaging devices is an ultrasound probe.

17. (Original) The medical imaging network of claim 10, wherein each of said

plurality of imaging systems is one of a Computed Tomography (CT), X-ray, Positron

Emission Tomography (PET), Single Photon Emission Computed Tomography (SPECT),

Electron Beam Tomography (EBT), Magnetic Resonance (MR), and image-guided

surgery system.

18. (Original) The medical imaging network of claim 10, wherein the biometric

identifier is at least one of a fingerprint, handprint, voice, iris, retina, and facial

thermogram.

Serial No. 10/681,634 Response Under 37 C.F.R. § 1.111 February 21, 2006

- 19. (Original) A method of using a medical imaging system comprising: registering to use the medical imaging system, said registering comprising:
 - (i) inputting a biometric identifier into a biometric authorization unit;
- (ii) inputting personal information into the medical imaging system; and
- (iii) associating biometric data extracted from the biometric identifier with the personal information; and

storing the biometric data and associated personal information;

enabling use of the medical imaging system when biometric data input at the biometric authorization unit matches stored biometric data.

- 20. (Original) The method of claim 19, further comprising storing individual imaging preferences for the medical imaging system as user preference information and associating the user preference information.
- 21. (Original) The method of claim 19, further comprising allowing said registering step by inputting a password.
- 22. (Original) The method of claim 19, wherein the medical imaging system is one of an ultrasound, Computed Tomography (CT), X-ray, Positron Emission Tomography (PET), Single Photon Emission Computed Tomography (SPECT), Electron Beam Tomography (EBT), Magnetic Resonance (MR), and image-guided surgery system.

Serial No. 10/681,634 Response Under 37 C.F.R. § 1.111 February 21, 2006

23. (Original) The method of claim 19, wherein the biometric identifier is at least one of a fingerprint, handprint, voice, iris, retina, and facial thermogram.

24. (Original) A method of using audio/video equipment comprising:

registering to use the audio/video equipment by inputting biometric data;

storing the biometric data; and

enabling use of the audio/video equipment when biometric data input after said registering matches the stored biometric data.

25. (Original) The method of claim 24, further comprising restricting access to said registering step by requiring submission of a password.

26. (Original) The method of claim 24, wherein the audio/video equipment is a medical imaging system comprising one of an ultrasound, Computed Tomography (CT), X-ray, Positron Emission Tomography (PET), Single Photon Emission Computed Tomography (SPECT), Electron Beam Tomography (EBT), Magnetic Resonance (MR), and image-guided surgery system.

27. (Original) The method of claim 24, wherein the audio/video equipment is one of a television, camera, CD player, DVD player, and car stereo.
